

# “R para Ciencia de Datos”

## Manejar o Domar Datos

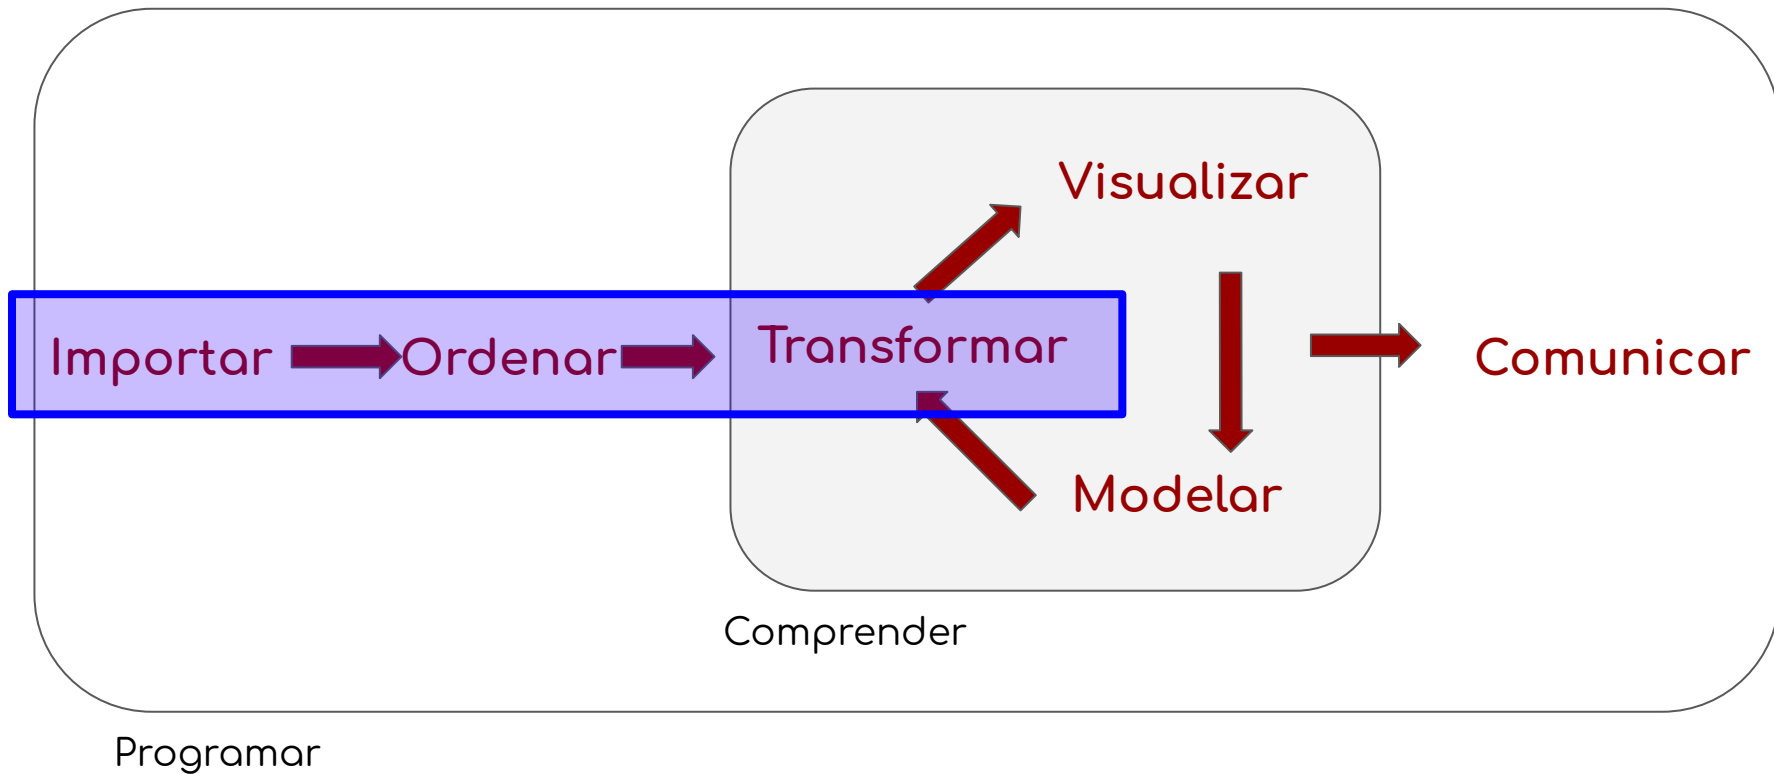

**R-Ladies La Paz**

MSc. Ing. Ruth Chirinos

# Domar Datos (wrangling)

*“Es el arte de tener tus datos en R de una forma conveniente para su visualización y modelado”*

# tibble 3.0.0

Tibble is a modern re-imagining  
of the data frame

```
tibble(  
  x = 1:5,  
  y = 1,  
  z = x^2 + y  
)  
#> # A tibble: 5 x 3  
#>       x       y       z  
#>   <int> <dbl> <dbl>  
#> 1     1     1     2  
#> 2     2     1     5  
#> 3     3     1    10  
#> 4     4     1    17  
#> 5     5     1    26
```

## tibble vs data.frame

1. Impresión en consola
2. Selección de subconjuntos

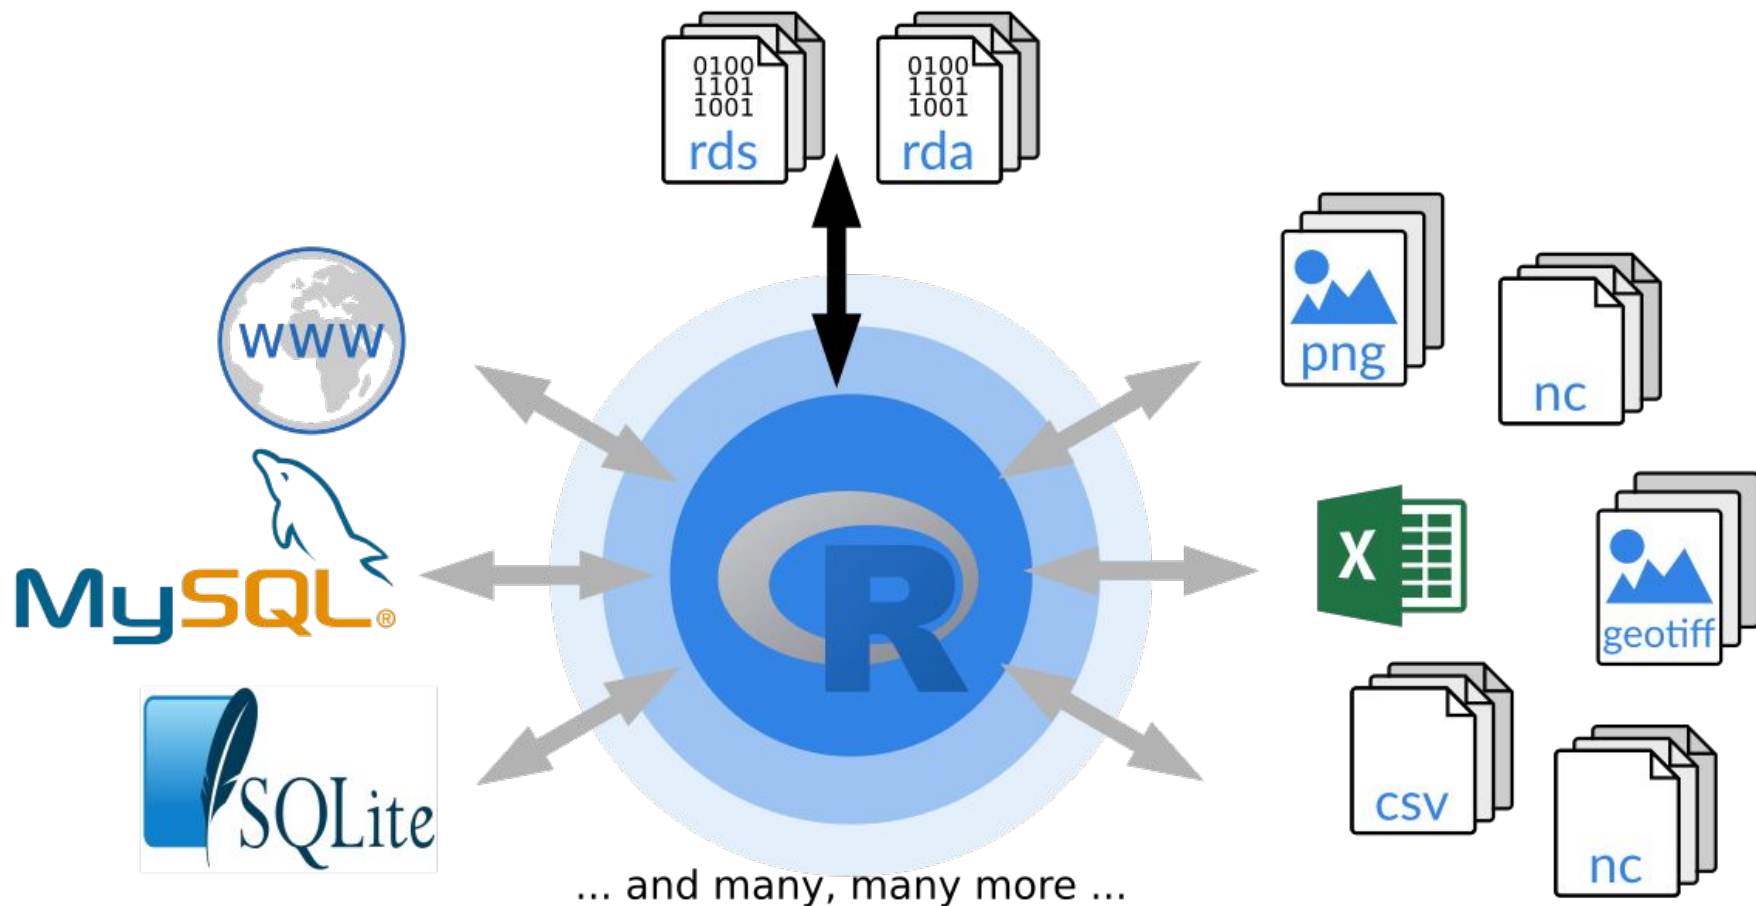

# tribble

```
tribble(  
  ~x, ~y, ~z,  
  #--|--|----  
  "a", 2, 3.6,  
  "b", 1, 8.5  
)  
#> # A tibble: 2 x 3  
#>       x           y       z  
#>   <chr> <dbl> <dbl>  
#> 1 a           2     3.6  
#> 2 b           1     8.5
```

Importar  
Datos

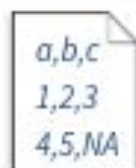

# Read Tabular Data

- These functions share the common arguments:

```
read_*(file, col_names = TRUE, col_types = NULL, locale = default_locale(), na = c("", "NA"),  
quoted_na = TRUE, comment = "", trim_ws = TRUE, skip = 0, n_max = Inf, guess_max = min(1000,  
n_max), progress = interactive())
```

```
a,b,c  
1,2,3  
4,5,NA
```

A	B	C
1	2	3
4	5	NA

## Comma Delimited Files

**read\_csv("file.csv")**

To make file.csv run:

```
write_file(x = "a,b,c\n1,2,3\n4,5,NA", path = "file.csv")
```

```
a;b;c  
1;2;3  
4;5;NA
```

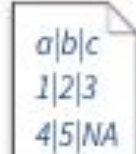

A	B	C
1	2	3
4	5	NA

## Semi-colon Delimited Files

**read\_csv2("file2.csv")**

```
write_file(x = "a;b;c\n1;2;3\n4;5;NA", path = "file2.csv")
```

```
a|b|c  
1|2|3  
4|5|NA
```

A	B	C
1	2	3
4	5	NA

## Files with Any Delimiter

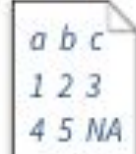

**read\_delim("file.txt", delim = "|")**

```
write_file(x = "a|b|c\n1|2|3\n4|5|NA", path = "file.txt")
```

## Fixed Width Files

**read\_fwf("file.fwf", col\_positions = c(1, 3, 5))**

```
write_file(x = "a b c\n1 2 3\n4 5 NA", path = "file.fwf")
```

```
a b c  
1 2 3  
4 5 NA
```

## Tab Delimited Files

**read\_tsv("file.tsv")** Also **read\_table()**.

```
write_file(x = "a\tb\tc\n1\t2\t3\n4\t5\tNA", path = "file.tsv")
```

# Save Data

Save **x**, an R object, to **path**, a file path, as:

## Comma delimited file

```
write_csv(x, path, na = "NA", append = FALSE,  
  col_names = !append)
```

## File with arbitrary delimiter

```
write_delim(x, path, delim = " ", na = "NA",  
  append = FALSE, col_names = !append)
```

## CSV for excel

```
write_excel_csv(x, path, na = "NA", append =  
  FALSE, col_names = !append)
```

## String to file

```
write_file(x, path, append = FALSE)
```

## String vector to file, one element per line

```
write_lines(x,path, na = "NA", append = FALSE)
```

## Object to RDS file

```
write_rds(x, path, compress = c("none", "gz",  
  "bz2", "xz"), ...)
```

## Tab delimited files

```
write_tsv(x, path, na = "NA", append = FALSE,  
  col_names = !append)
```

Gracias!
